
Main GUI
Runtime Lane
State 0:
Idle
GUI Window
launched via
root.mainloop()
State 1:
Unverified

Socket connects and intercepts: "CMD_REQQ_USER"

State 2:

Identity Setup Modal

User types 'name' in popup

↓

Hits "join room" button

↓

Dispatches string

State 3:

Authenticated Chat

(Spawns Background Network)

(Receiver Thread Zone)

Main UI Interaction Thread

- Monitors keyguest mouse clicks
- Binds Enter/Return text action
- Handles window close button

User submits "quit" or close window

Stage 4: Terminated

Receiver Loop Thread

- Blocks on socket wire [.recv]
- Safely appends strings to log
- Triggers emergency teardown

Parent Content steps
